**Real Experience and Practical Solutions
that deliver Added Value**

Our Style

Our approach is both commercial and hands on. Our commercial and operational experience, combined with close working with our clients ensures practical, effective and sustainable solutions

Our client base and management expertise covers most industries and business sectors

For over 15 years our team of consultants has developed practical Logistics and Supply Chain solutions for companies in the UK and mainland Europe.

Bisham is staffed by directors and senior managers from industry, many of whom have held main board positions.

Given the multi-disciplinary functions included in supply chain management, those clients, who embark in fundamental changes in their logistics and supply chain, often find themselves in a Change Management Programme. Bisham personnel have direct experience in CMP in their previous careers and some continue to lecture at management schools on this subject.

Customers profit from our strategic and operational experience.

Our Experience

Our assignments range from major strategic projects lasting months to a few days reviewing a company's operations.

Our clients range from multi-nationals to small, private companies.

We cover strategic, operational and tactical issues with proven processes and project methodologies.

We work throughout Europe with offices in the UK and Netherlands.

Strategy and Operations
